ABSTRACT OF THE DISCLOSURE

A user interface for a printer is disclosed for printing image files. The user interface includes a display for displaying information, including messages
5 to a user, an input device for enabling the user to respond to the displayed messages, an interface to a detachable memory device including at least one image file, and a processor coupled to the input device, display, and to the interface. The processor is
10 responsive to a user input to print a thumbnail of the image file, in the same orientation in which the image file was acquired, by utilizing stored orientation information. The processor is also responsive to a user input to print a subset of the image files. The
15 thumbnails are printed with an image number, a date, and a unique identifier of the image file.
